<b>Affected version:</b>	Beta RC3		

#### Description

The following example program causes the editor to report a "WARNING: variable "MYARR\_array" Used without being declared at line xx...."

This warning should not be reported. The main issue is that the editor is re-positioned on the line of the warning and loses the position where the user was originally editing, leaving the user to having to scroll through the code to find the position they were last working, especially annoying with large programs.

```
Dim MYARR(20, 10)
Global MYARR()
```

```
Procedure MyTest[x]
MYARR(10, 10) = 0
End Proc
```

```
Do
MyTest[MYARR(10, 10)]
Wait Vbl
Loop
```

#### History
