Affected version:			
Description			
Related to bug #399 (which has been resolved).			
For example:			
<pre>X=10 Gosub 10*X Print "no error" End 100 Print "test sub" Return</pre>			
The above code fails to transpile with t label not defined at line 2.			
If, however, I start the equation with X, it works:			
<pre>X=10 Gosub X*10 Print "no error" End 100 Print "test sub" Return</pre>
