AOZ Studio Beta - Support #925

Faq / Tips to make AOZ Studio work on Linux distro

10/19/2022 03:43 PM - Baptiste Pillot

Status:	New		**Start date:**	10/19/2022
Priority:	Normal		**Due date:**	
Assignee:			**% Done:**	0%
Category:			**Estimated time:**	0:00 hour
Target version:				
Affected version:	1.0.0 (B16) u25			

Description

- **Nothing happens when I run install.sh**
  - Did you read the README.txt file ? Launch a terminal and run : apt update && apt install -y python3 python3-tk
- **Nothing happens when I double-click on the AOZ Studio icon**
  - Launch a terminal and run : cd ~/AOZ_Studio/bin && ./aozstudio and look at the error message :
  - If contains "GPU process isn't usable. Goodbye." : you can try to run ./aozstudio --no-sandbox
- **Developper Tools does not launch (Ctrl+Maj+I)** : run aozstudio --no-sandbox and it will work. You can change the execution line into your desktop icon (right-click then properties).
- **AOZ Viewer does not work** : delete the file ~/AOZ_Studio/AOZ_Studio/electronUserData/Cookies , quit AOZ Studio and launch it again, and it will work (but not for long : you will do this often).

About the --no-sandbox flag : we can't add it in production, as it will disable the Chromium sandbox mode : https://www.electronjs.org/docs/latest/tutorial/sandbox/#disabling-chromiums-sandbox-testing-only. Using it is a temporary patch to make things work when it crashes, but the AOZ team would better find out what is crashing when it is not set.
